Project Overview

This project is focused on integrating the TripAdvisor E-Management app with Salesforce, designed to address the challenge of providing a seamless, all-in-one travel management solution. The goal is to deliver a comprehensive platform by leveraging Salesforce's CRM capabilities, automation tools, and integration with TripAdvisor's API. Through this project, we aim to enhance user experience by offering centralized trip planning and booking, improve operational efficiency through automated workflows like flight reminders and discounts, and ensure data accuracy with real-time insights. This initiative supports the long-term goals of empowering travelers with informed decision-making, increasing customer satisfaction, and driving business efficiency.

Objectives

Business Goals

- 1. Enhance customer experience by providing timely and relevant travel reminders and updates.***
- 2. Increase customer retention and satisfaction through automated loyalty discounts and personalized recommendations.***

3. Improve operational efficiency by streamlining booking, planning, and review sharing processes.

4. Boost revenue through targeted upselling of travel packages, hotels, and food options based on customer preferences.

5. Strengthen brand value by integrating real-time feedback loops for continuous improvement.

Specific Outcomes

1. Scheduled Apex for Flight Reminders:

Automate email notifications for flights departing within the next 24 hours.

Ensure 100% reliability in sending reminders to relevant customers.

2. Customer Discount Automation:

Automatically apply loyalty discounts for returning customers who meet defined criteria.

Track and report the success rate of discounts in driving repeat business.

3. Integrated Flow for Data Management:

Create Salesforce flows to handle and manage hotel, flight, and food option data seamlessly.

Ensure all flows are optimized to reduce manual intervention and maintain data accuracy.

4. Enhanced Reporting for Insights:

Provide actionable dashboards showing trends in bookings, cancellations, and customer feedback.

Enable business users to analyze and act on data in real time.

5. Apex Trigger and Handler for Reviews:

Implement triggers to process and categorize customer reviews into actionable insights.

Ensure all reviews are categorized within 5 minutes of submission.

6. Improved API Integration:

Enable seamless communication between Salesforce and the TripAdvisor E-Management app.

Ensure 99.9% uptime for API calls to support uninterrupted operations.

Formula Options

Discount Percentage:

The screenshot shows the Salesforce interface for defining a custom field. On the left is a sidebar with navigation links: 'Lightning Experience Transition Assistant', 'Salesforce Mobile Quick Start', 'Home', and 'Administer'. The main content area is titled 'Customer Custom Field Discount Percent' with a 'Back to Customer' link. Below the title are tabs for 'Edit', 'Set Field-Level Security', 'View Field Accessibility', and 'Where is this used?'. The 'Field Information' section contains a table with the following details:

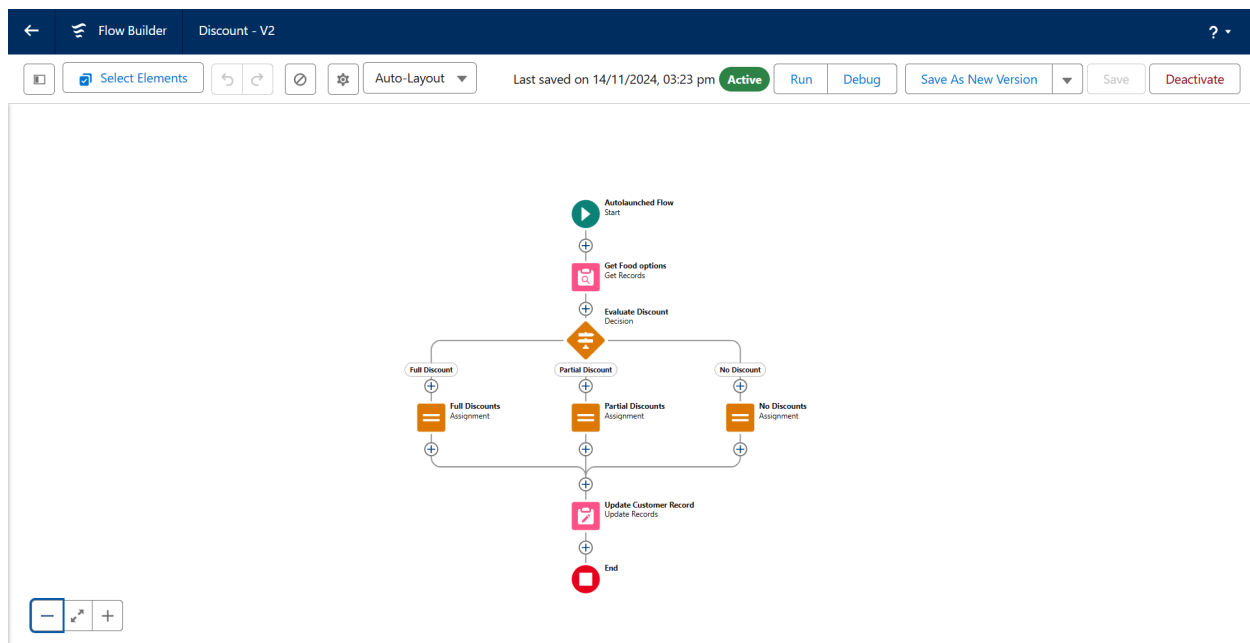

Field Label	Discount Percent	Object Name	Customer
Field Name	Discount_Percent	Data Type	Percent
API Name	Discount_Percent__c		
Description			
Help Text			
Data Owner			
Field Usage			
Data Sensitivity Level			
Compliance Categorization

Handle automated updates for the food options count when changes occur.

Apply discount logic for customer purchases.

Apex Triggers:

Maintain business rules for related object updates.

Apex class:

```
public class FoodOptionTriggerHandler {
```

```
// Method to update hotel information based on food options
```

```
    public static void updateHotelInformation(List<Food_Option__c>  
newFoodOptions, List<Food_Option__c> oldFoodOptions,  
TriggerOperation operation) {
```

```
        Set<Id> hotelIdsToUpdate = new Set<Id>();
```

```
// Collect unique Hotel Ids affected by food options changes
```

```
    for (Food_Option__c foodOption : newFoodOptions) {
```

```
        hotelIdsToUpdate.add(foodOption.Hotel__c);
```

```
    }
```

```
// Update hotel information based on food options
```

```
    List<Hotel__c> hotelsToUpdate = [SELECT Id, Name,  
TotalFoodOptions__c FROM Hotel__c WHERE Id IN  
:hotelIdsToUpdate];
```

```
    for (Hotel__c hotel : hotelsToUpdate) {
```

```
        // Recalculate total food options count
```

```
        Integer totalFoodOptions = [SELECT COUNT() FROM  
Food_Option__c WHERE Hotel__c = :hotel.Id];
```

```

        hotel.TotalFoodOptions__c = totalFoodOptions;

    }

    // Update hotels with new total food options count

    update hotelsToUpdate;

}

}

Apex Trigger:
    trigger FoodOptionTrigger on Food__Option__c (after insert, after
    update, after delete) {

        if (Trigger.isAfter) {
            if (Trigger.isInsert) {

FoodOptionTriggerHandler.updateHotelInformation(Trigger.new, null,
'INSERT');
            } else if (Trigger.isUpdate) {

FoodOptionTriggerHandler.updateHotelInformation(Trigger.new,
Trigger.old, 'UPDATE');
            } else if (Trigger.isDelete) {
                FoodOptionTriggerHandler.updateHotelInformation(null,
Trigger.old, 'DELETE');
            }
        }
    }
}

```

Flight Reminder System:

Class solution:

```
_public class FlightReminderScheduledJob implements Schedulable {  
  
    public void execute(SchedulableContext sc) {  
        sendFlightReminders();  
    }  
  
    private void sendFlightReminders() {  
        // Query for flights departing within the next 24 hours  
        List<Flight__c> upcomingFlights = [SELECT Id, Name,  
DepartureDateTime__c, ContactEmail__c FROM Flight__c  
            WHERE DepartureDateTime__c >=  
:DateTime.now()  
                AND DepartureDateTime__c <=  
:DateTime.now().addDays(1)];  
  
        for (Flight__c flight : upcomingFlights) {  
            // Send email reminder  
            if (flight.ContactEmail__c != null) {  
                Messaging.SingleEmailMessage email = new  
Messaging.SingleEmailMessage();  
                email.setToAddresses(new List<String>{  
flight.ContactEmail__c });  
                email.setSubject('Flight Reminder: ' + flight.Name);  
                email.setPlainTextBody('This is a reminder for your  
upcoming flight ' + flight.Name +  
                    ' departing on ' + flight.DepartureDateTime__c);  
                Messaging.sendEmail(new  
List<Messaging.SingleEmailMessage>{ email });  
            }  
        }  
    }
```

```
}  
}
```

Apex Code:

//Define the cron expression for 6 AM daily

String cronExp = '0 0 6 * * ?';

//Schedule the job

***System.schedule('FlightReminderJob', cronExp, new
FlightReminderScheduledJob());***

***Create a Schedulable Apex class to identify flights departing
within 24 hours.***

Send email alerts to customers and log success notifications.
User Interface Design:

***Ensure clear and intuitive layouts for managing Hotels, Flights,
and Food Options.***

Testing and Validation

Testing Approach:

Unit Testing:

Apex classes and triggers tested to ensure 100% code coverage.

User Interface Testing:

Verify the accuracy and usability of flows and custom object layouts.

Validation Steps:

Check automated updates for the food options count.

Validate discount calculations based on customer purchases.

Confirm timely email reminders and success notifications for flight schedules.

Key Scenarios Addressed by Salesforce in the Implementation Project

Hotel Data Management: Automatically update hotel records when food options are modified.

Customer Benefits Automation:

Ensure customers receive appropriate discounts based on their purchase amounts.

Flight Reminder Notifications:

Provide timely email alerts for upcoming flights with confirmation notifications.

Conclusion

Summary of Achievements:

Automated processes for food options and hotel data management.

Implemented customer discount logic based on purchase thresholds.

Scheduled Apex for reliable flight reminders with success notifications.

Leveraged Salesforce capabilities to enhance operational efficiency and customer satisfaction.
